Re: UL 1978 Listings for Grease Duct Enclosure Materials

Standards Affected	Effective Date of Revised Requirements	New/Revised Requirements
UL 1978	Immediate	CUN 08-01 Withdrawn

Upon review of listings and recent revisions of codes and standards, Intertek has determined that a more comprehensive review of listings is required that indicated in our March 6, 2008 CUN 08-01 notice. That notice is hereby withdrawn.

We have determined that listings of grease ducts need to be restructured and revised according to the primary standard(s) that applies to the specific listed product, system or assembly. Therefore, we will be revising listings which refer to UL 1978, UL 2221, ASTM E2336 and ISO 6944 so that listed products and systems will indicate the appropriate standard under the "Evaluated to:" section of the listing. Those products that have been evaluated for compliance with multiple standards will include the additional applicable standards in the listing.

We will be starting the process in January of 2009 and expect to complete it within the first quarter. Drafts of revised listings will be provided to each client for review and acceptance prior to updating the on-line listing directory.

We apologize for any confusion this situation may have created.

Sincerely,

Bob Davison
Certification Manager
